Assembly Instructions for: **ROUND WOODEN PICNIC TABLE FOR TODDLERS**

CONTENT OF BOXES

Quantity	Description	Drawing
1	Tabletop	
4	Benches	
4	Legs	
8	Diagonal Supports	
4	Cross supports	
32	#8 x 3" Screws	
24	Carriage Bolts 5/16" x 5", washers and nuts	

ASSEMBLY INSTRUCTIONS

Thank you for purchasing Forever Redwood patio furniture. Forever Redwood is built by Old-Growth Again Restoration Forestry (OGA). OGA is dedicated to restoration forestry. Sales of patio furniture finance our restoration work in California redwood forestlands.

Tools required: 1/2 inch ratchet and a mallet or small hammer.

The parts that go together have the same numbers written next to the predrilled holes they attach to. Align the parts with the numbers as shown for ease of reference.

Step 1: Unpack your table and make sure you have all the parts listed above.

Step 2: Place the tabletop upside down on carpeting or some other soft surface so that the tabletop is not scratched in the assembly process. You will notice that it has predrilled holes underneath with numbers written next to the holes. Use the carriage bolts provided to attach every piece. The bolts should be tapped all the way into the wood to set them, then insert a washer and the nut and tighten a little bit. Do not over tighten or you will crush the redwood and weaken the structural strength of the table. Do not force the bolt into the pre-drilled hole. If you are using force, the part is not properly aligned or is on the wrong side.

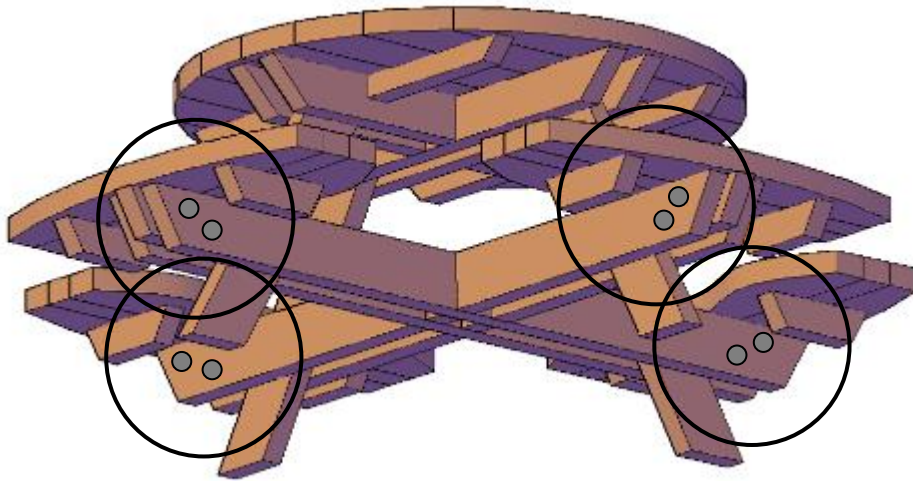

Step 3: Attach legs to tabletop. The 4 legs are clearly marked with numbers that correspond to numbers on the four attachment points in the underside of the tabletop. Match up the corresponding numbers. Each leg is attached to the tabletop with two 5" long carriage bolts, washers and nuts. Align the leg to the predrilled holes, tap the bolts all the way in (set the bolt into the wood), add a washer and tighten the nut. Make sure you are attaching the correct side. The bolts should tap into their hole. Repeat this step for the other 3 legs.

Step 4: Attach the cross supports to legs with two 5" carriage bolts, washers and nuts per leg. Match up the numbers on the cross supports to the numbers written on the table legs. There are a total of four table leg cross supports that form a T under the table to strengthen the legs and hold the benches. These four leg cross supports are notched in the middle to allow them to cross one another into a T. Align the leg cross supports to the matching numbers, tap in the carriage bolts all the way in (to set the bolt into the wood), then add a washer and tighten the nut a little. Do not overtighten or you'll crush the redwood and weaken the table's structural strength.

Step 5: Carefully turn the table around to begin attaching the benches to the cross supports. It is a good idea to have a helper or two for this step. Be careful not to place all the weight of the table on one of the end of the leg cross supports – the table is very heavy and easily crush the end of the board if too much stress is placed on that point. Align the holes carefully and tap in the two 5" long carriage bolts, add washers and nuts. Repeat this step with all four benches.

Step 6: The final step is to attach diagonal supports at 45 degree angles underneath the benches. Match up the numbers on the diagonal support ends to the numbers written underneath the benches and table's leg. Attach with 2 screws to bench and 2 screws to leg. Repeat this step to attach all the other diagonal supports.

Thank you. If you have any questions, please call or email us.
